

MAPPING OUT THE POLLUTIONS

An intensive pollution mapping activity was carried out in May until December 2014 by AU2 community.

The outcome has led to a detail design of AU2 draining mapping. The aim of this mapping is to identify the key problem especially on the sewerage flow and discharge, drainage flows and problems.

Following are the key main points identified from the mapping:

- Direct effluent discharges into the Klang River,
- Direct Rubbish through existing drainage system,
- No communication between ROL contractors with local community
- Some of the work by ROL Contractor was not completed/not functioning

These findings were shared with DID Malaysia during the Brainstorming session on ROLPOP on 15th November 2014. On 23rd November 2014, PKNS have started work on the sewage discharge point when overflow were seen along the river walk.
